

Challenge Manager[®]

Use the energy of change
Master the complexity of the transformatio

Powerful - Pioneering - Targeted - Efficient in:
Management | Leadership | Sales | Marketing | Communication |
Project management | Team Building | Motivation | Performance

"Change" becomes "Challenge"

The idea of "a change" was yesterday. Today are organizations and Companies faced with a variety of fast, permanent, qualitative changes.

In almost all sectors and sectors, the current changes are not an exacerbation of the well-known economic and social rules of the game. They represent an explosive increase in speed and complexity, i.a. caused by increasingly dense networked systems and the dynamics of technologically and socially driven change.

The structures and functions of most organizations and companies date back to the comparatively simple world of the last century. Many have failed to introduce predictive challenge management systems for today's conditions.

Future-oriented companies and organizations reliably achieve more and higher success through good and proper "challenge management". They have the skills to not only master the complexity and speed that is emerging everywhere, but to use it successfully.

Use complexity and dynamics correctly

Millions of executives are challenged in their leadership and management today. You have to leave the old and learn new things. Classic organizations were still highly resilient to management errors. Modern organizations, on the other hand, are very sensitive: they hardly forgive management mistakes. Most governance systems need to be deeply reformed and revolutionized. This is especially important in the increasingly numerous organizations for which information and knowledge are the most important resources. However, there is a change that is almost constantly underestimated or even ignored: In the new knowledge organizations, management has to be mastered even better, almost virtuoso. **You do not need another management, but the right thing.**

The key to high-performance

Effectively and efficiently, Challenge Management makes changes with successful neuroscience methods to success.

Companies and organizations are thus mastering new challenges and exploiting extraordinary opportunities in fast and demanding changes.

The goal: to master complexity

For the challenges of complexity, most of today's organizations are poorly equipped. Challenge Management increases the professionalism of profitability in change processes.

Regardless of sector and sector, companies and organizations achieve the best results.

Challenge Management

combines cutting-edge management and business sciences with a variety of other disciplines such as neuro-physics, life science, market research, communication, cybernetics, developmental psychology, artificial intelligence and cultural sciences.

Management

Tailored programs for high potentials to top executives

Dipl. Ing. Robert Egger

The neuro-physicist among management consultants is an expert in challenge management: innovative solutions to complex challenges.

As a former project manager in space technology, he is a pragmatic visionary and a binding partner with many years of experience and competence.

With "Challenge Management" Robert Egger has developed a well-proven leadership and management system. In his work as a management consultant he combines cutting-edge management and economics with a variety of other disciplines such as neuro-physics, life science, market research, communication, cybernetics, developmental psychology, artificial intelligence and cultural sciences. In his work, he focuses on finding new solutions, result orientation, self-motivation and performance improvement.

As a consultant, speaker and author, Robert Egger is characterized by his great practical relevance, convincing techniques and commitment. He is a captivating pragmatist and motivator, who integrates his experience as Challenge Manager® directly into his consulting and lecturing activities. It provides up-to-the-minute impulses, highlights strategically necessary changes and thus initiates change processes that impact on results.
